Financial Qbits™
Hyperfast Financial Literacy
Web app

Program Description – Standard Version

Overview

Financial Qbits is a paradigm-breaking financial literacy training program that teaches financial accounting in record time. This translates to a solid and hyperfast understanding of financial statements. Financial Qbits is based on the new quantum technology which condensed the countless concepts of the old paradigm from 1494 into one visual structure that is much easier to learn and apply. This vast reduction in complexity allows people to learn *financial accounting* in 10 hours; a process that would take at least one year with the traditional scheme. Results are based on solid empirical evidence.

Ideal for

Business students, entrepreneurs, business owners, business executives, bankers, business consultants, business lawyers and educators.
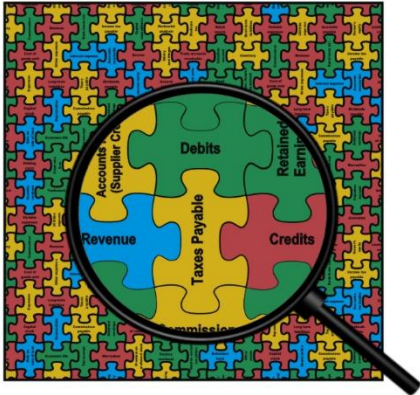

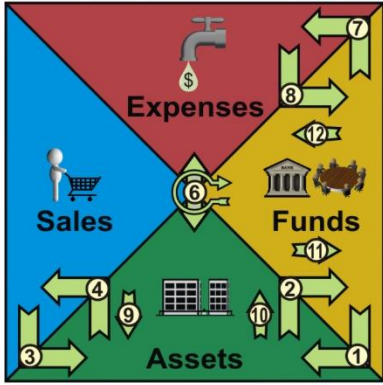

Learning objectives

- Speak the language of accountants in record time.
- Understand the *philosophy* behind systems like QuickBooks®.
- Build financial statements from scratch to truly understand the numbers (case study).
- Perform basic financial analysis to evaluate the condition of a business (case study).

All in 10 hours & in one Learning Management System (LMS).

Program contents

The program consists of: 5 animated video-lectures that bring the world of financial accounting to life, 5 self-grading quizzes, one case study and a self-grading final exam.

Double-Entry Accounting System (Pacioli, 1494)		Financial Qbits (Qbit Solutions Research Team, 2013)
At least 1 year	Time to grasp	10 hours
1 text book	Model size	1 diagram
Text-based	Presentation	Shape-based
